

Dataset composition and the patient-disjoint LOMO protocol

(a) BreakHis: 7,909 images, 82 patients
(24 benign, 58 malignant)

(b) Images per split, mean over 3 seeds
(whiskers = min-max; train/val from the 3 training mags)

(c) Patients per split (65/15/20% per class)
identical for every held-out mag and seed
